

Assignment 1

Campaign with Conversion Tracking
Ready for the assignment?
You will find instructions below to submit.

In this lab, you build a working Google Ads Search campaign for a sample SaaS brand using the account setup, keyword, and ad-format skills from this module. You research keywords, write ad copy with extensions, choose a bidding strategy, and install a conversion tracking tag on a test landing page so the campaign can report on results.

Campaign Scenario

Brand: TaskFlow

Product: Cloud-based project-management software for small teams

Target audience: Small businesses, startups and small professional teams

Offer: 14-day free trial

Campaign objective: Generate free-trial registrations through Google Search Ads

Primary conversion: Completed free-trial registration

Step 1:

I used Google Keyword Planner to research keywords relevant to project management software for small teams. The research was set to Australia and English, with branded search terms filtered out to focus on generic searches relevant to the SaaS product.

Selected keywords

Selected keywords

Keyword	Avg. monthly searches	Competition
project management software	1K–10K	Low
project management tools	1K–10K	Medium
project tracking software	1K–10K	Low
project planning software	1K–10K	Low
project management software tools	1K–10K	Low
project tracking tools	1K–10K	Medium
project management system	100–1K	Medium
project management apps	100–1K	Medium
best project management software	100–1K	High
project management software for small business	10–100	Medium

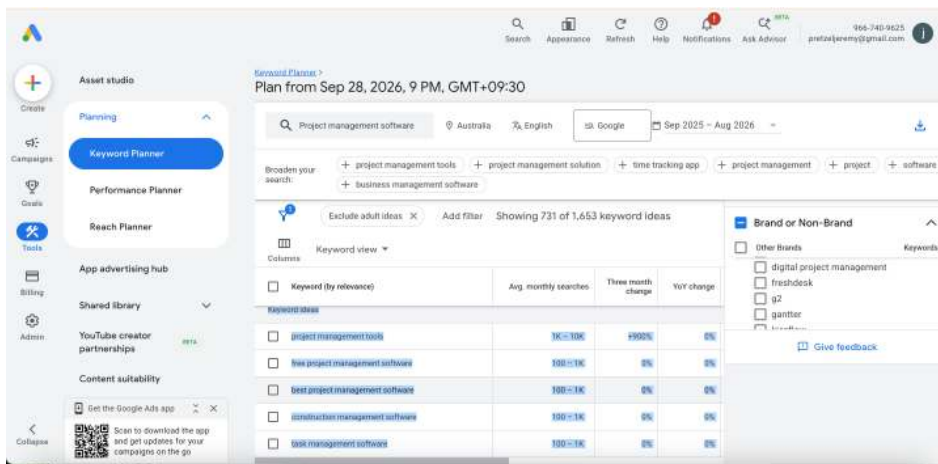

Figure 1. Google Keyword Planner results for “project management software”.

I selected keywords closely related to users actively searching for project management software, planning and tracking solutions. The ad group combines higher-volume category terms with more specific searches closely aligned with the target audience of small teams and businesses.

The screenshot shows the "Measure conversions on your website" setup screen. It prompts the user to scan their website to find the best way to connect it to Google Ads. The user has entered the website URL: `https://jeremy-pretzel.github.io/taskflow-landing-page/`. The screen also shows a "Connect using Google tag" section with a "Google tag" button and a "Set up" button. The "Google tag" button is labeled "Not installed yet".

The screenshot shows the "Create a conversion" setup screen. It prompts the user to create a conversion in two ways: Manually, if you are comfortable adding code to your website, or Automatically, by providing the website URL. The user has selected "Automatically without code". The screen shows the "Event type" dropdown set to "Page load", the "Match when" dropdown set to "URL starts with", and the "URI" field containing `jeremy-pretzel.github.io/taskflow-landing-page/`. The screen also shows a "Conversion settings" section at the bottom.

Google Ads conversion tracking is being configured using a Google tag so that when a user successfully completes the TaskFlow free-trial signup and reaches the thank-you page, Google Ads records the action as a conversion.

Google Ad → TaskFlow landing page → Sign-up form → Submit → Thank-you page → Conversion recorded

Conversion Tracking – What is the point?

A conversion is an action that I want someone to take after clicking on my ad. For TaskFlow, the conversion is someone signing up for the free trial.

Google Ads already tracks impressions and clicks, but conversion tracking tells me whether those clicks led to something valuable.

For example:

1,000 impressions → 100 clicks → 10 free-trial sign-ups

If I spent \$200 and received 10 conversions, my cost per conversion would be \$20.

For TaskFlow, I set up the Google tag so that when someone completes the signup form and reaches the thank-you page, Google Ads records this as a conversion.

Google Ad → Landing Page → Sign-up Form → Thank-you Page → Conversion

This means I can measure how effective my ads are at generating actual sign-ups rather than just clicks.

Analysis – Why Conversions Matter

The whole point of running a Google Ads campaign is not just to get people to click on the ad, but to get them to convert and complete the action the business wants them to take.

Every time someone clicks the ad, the business spends part of its advertising budget. If someone clicks on the TaskFlow ad but leaves without signing up, the business has still paid for that click but has received no conversion from it.

For example, if TaskFlow has a \$1,000 advertising budget and the average cost per click (CPC) is \$2:

$\$1,000 \div \$2 = 500$ clicks

If 25 of those 500 people sign up for the free trial:

Conversion rate = $25 \div 500 \times 100 = 5\%$

The campaign has therefore generated 25 conversions from 500 clicks, giving it a conversion rate of 5%.

I can then calculate how much each conversion cost:

Cost per conversion = $\$1,000 \div 25 = \40

This means TaskFlow spent an average of \$40 in advertising for each free-trial signup.

If only 10 people converted:

$\$1,000 \div 10 = \100 per conversion

This shows why getting clicks alone is not enough. The business could spend its entire \$1,000 budget and receive hundreds of clicks, but if very few people actually sign up, the campaign may not be using the budget effectively.

Conversion tracking allows me to measure this performance and understand whether the advertising spend is actually generating results.

Ad budget → Clicks → Website visitors → Conversions

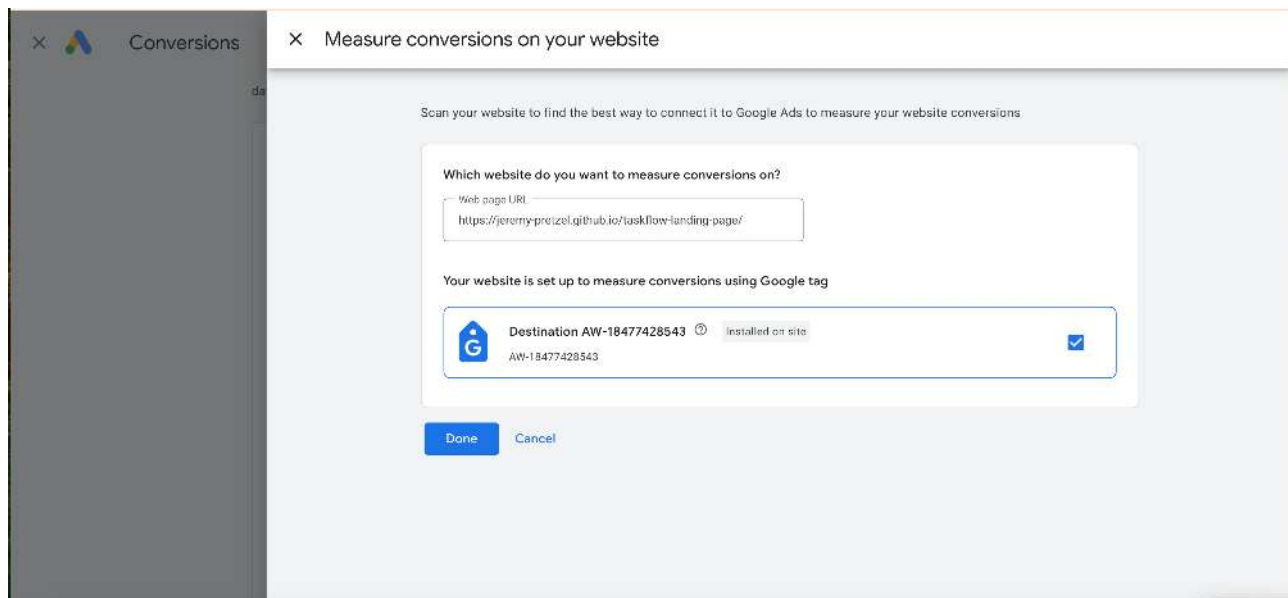

The aim is therefore to attract the right people, not simply as many clicks as possible, and encourage those visitors to complete the desired action.

Budget = how much money you're willing to spend

Bid = how Google competes for individual ad opportunities

Click = generally when some of that budget gets spent in a Search campaign

Conversion = whether that visitor ultimately does what you wanted, such as signing up

Conversion Tracking Setup

Create and measure conversions

To create conversions, click on **+ Create conversion**. You'll be prompted to choose a data source that you selected in the first step. If available, you may see suggestions below to set up conversions faster. When finished, you'll review everything on the **Get instructions and finish** page.

Sign-up

When someone signs up for a free newsletter or trial, creates an account, or pre-registers

Conversion Tracking Verification:

I installed the Google tag (AW-18477428543) on the TaskFlow website and configured a Sign-up conversion to trigger when a user reaches the /taskflow-landing-page/thank-you page after submitting the free-trial form. I tested the conversion using Google Tag Assistant. Tag Assistant successfully detected the Google tag and showed the Sign-up conversion under “Hits Sent,” confirming that the conversion event fired correctly. Google Tag Assistant was used to verify the conversion tracking implementation. The Google Ads tag loaded successfully, and a Sign-up conversion hit was sent when the user reached the thank-you page after completing the free-trial registration.

Analysis of the TaskFlow Search Advertising Funnel

The TaskFlow campaign has been designed as a connected customer journey in which the Google Search ad attracts potential customers, the landing page communicates the product offering, and conversion tracking measures whether users complete the desired action.

The journey begins when a potential customer searches Google using a relevant term such as “project management software.” The Search campaign is designed to target these high-intent searches using keywords identified through Google Keyword Planner. The Google Search ad then acts as the first point of contact, communicating TaskFlow's value proposition and directing interested users to the TaskFlow landing page.

Google Search → TaskFlow Search Ad → Landing Page → Start Free Trial → Sign-up Form → Thank-you Page → Conversion Recorded

The landing page supports the advertising campaign by explaining TaskFlow's project-management features and encouraging users to begin a 14-day free trial. When a user selects the free-trial call-to-action, they are directed to the sign-up form. Successful submission sends the user to the dedicated thank-you page.

The thank-you page is also the point at which the Google Ads Sign-up conversion is triggered. This creates a measurable connection between the advertising activity and the campaign objective. Google Tag Assistant was used to test the implementation and confirmed that the Google tag loaded successfully and that the Sign-up conversion hit was sent when the thank-you page was reached.

This funnel therefore connects traffic acquisition with conversion measurement. Rather than measuring only whether an advertisement receives a click, the setup allows the campaign to measure whether that traffic progresses through the landing page and ultimately completes the intended free-trial registration.

Customer funnel:

Google Search → Search Ad → Landing Page → Free Trial CTA → Sign-up → Thank-you Page → Conversion

1. Search intent

Someone searches “project management software”

↓

2. Google Search Ad

They see your TaskFlow ad

↓ click

3. Landing Page

They arrive on the TaskFlow website and learn about the product

↓ Start Your Free Trial

4. Sign-up Form

They enter their details

↓ Submit

5. Thank-you Page

Registration completed

↓

6. Conversion Recorded

Google Ads records the Sign-up conversion

Campaign workflow:

Objective → Conversion Goal → Keyword Research → Landing Page → Tracking → Search Campaign → Launch → Optimisation

1. Define the business objective

TaskFlow wants to generate free-trial registrations from small teams.

↓

2. Define the conversion

Decide what success means before advertising.

For TaskFlow: completed free-trial signup.

↓

3. Research the audience and keywords

Use Keyword Planner to identify searches such as “project management software” and “project management software for small business.”

↓

4. Build the landing page and conversion journey

Create:

Landing page → Start Free Trial → Signup form → Thank-you page

The landing page should match the search intent and what the eventual ad promises.

↓

5. Install conversion tracking

Set the Google tag up and configure the thank-you page as the Sign-up conversion.

↓

6. Test the conversion tracking

Run through the signup yourself and use Tag Assistant to confirm:

Signup → Thank-you page → Sign-up conversion fires 

↓

7. Build the Search campaign

Now create the campaign around everything you've established:

keywords → ad group → Responsive Search Ad → assets → targeting → bidding/budget.

↓

8. Connect the ad to the landing page

The ad's final URL becomes your TaskFlow landing page.

↓

9. Review everything, then launch

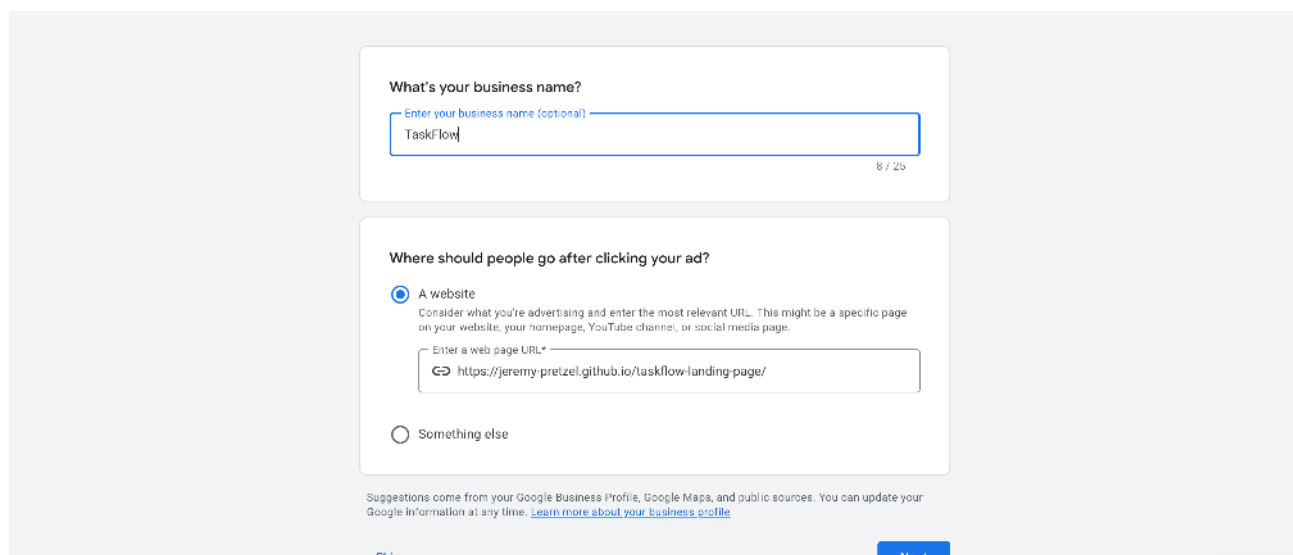

Check that the ad promise, keywords, landing page and conversion action all align.

↓

10. Measure and optimise

Once real traffic comes in, analyse:

Campaign Setup – Business Information & Landing Page

The screenshot shows the Google Ads campaign setup interface. It has two main sections: "What's your business name?" and "Where should people go after clicking your ad?".

What's your business name?

Campaign objective: leads

Choose your objective

Select an objective to tailor your experience to the goals and settings that will work best for your campaign

Sales

Drive sales online, in app, by phone, or in store

Leads

Get leads and other conversions by encouraging customers to take action

Website traffic

Get the right people to visit your website

App promotion

Get more installs, engagement and pre-registration for your app

YouTube reach, views, and engagements

Drive awareness and consideration of your product or brand
Previously known as 'Awareness and consideration'

Local store visits and promotions

Drive visits to local stores, including restaurants and dealerships.

Create a campaign without guidance

You'll choose a campaign next

Campaign type: search

Select a campaign type

Search

Get in front of high-intent customers at the right time on Google Search

Performance Max

Reach audiences across all of Google with a single campaign.

Demand Gen

Drive demand and conversions on YouTube, Google Display Network, and more with image and video ads

Display

Reach customers across 3 million sites and apps with engaging creative

Shopping

Showcase your products to shoppers as they explore what to buy

Video

Reach viewers on YouTube and get conversions

App

Drive downloads and grow engagement for your app

Bidding strategy: Maximise Conversions. I selected Maximise Conversions because the primary objective of the TaskFlow campaign is to generate completed free-trial registrations rather than simply maximise website traffic. Conversion tracking was configured and tested before the campaign was created, allowing Google Ads to optimise bidding toward users more likely to complete the Sign-up conversion. For an initial test campaign, performance would be monitored closely before increasing the advertising budget.

Google Ads Auction — Key Definitions

Keywords = What you compete for

Determine which searches can trigger your ad.

Bidding = How you compete

Controls how Google uses your budget in the ad auction.

Ad + Landing Page = Relevance & Quality

Must be relevant and useful to the search. This helps determine your competitiveness.

Ad Rank = If & where you show

Determines whether your ad appears and its position.

Conversion Tracking = Did it work?

Measures whether the visitor completed your goal, e.g. free-trial signup.

Flow:

Keyword → Auction → Bid + Quality → Ad Rank → Ad shown → Click → Conversion

Campaign settings

To reach the right people, start by defining key settings for your campaign

Networks

☐ Google Search Partners Network (recommended)
Ads can appear near Google Search results and on other [Google Search Partners](#) websites when people search for terms that are relevant to your keywords. Search Partners can include hundreds of non-Google websites, Parked Domains, as well as YouTube and other Google sites.

 **Opt in to Google Search Partner Network:** Get more conversions and conversion value by opting in to Google Search Partner Network (SPN) [?](#)

Apply

☐ Google Display Network (recommended)
Ads can appear on relevant sites, videos, and apps across Google (like YouTube) and the Internet when you have leftover Search budget.

 **Use Display Expansion:** Show your ads in more places and get more conversions at a similar cost per action (CPA) [?](#)

Apply

Select audience segments to add to your campaign. You can create new Your data segments by clicking on + New segment in the Search tab. [?](#)

Search	Browse	2 selected	Clear all
business software	X	In-market	
− What they are actively researching or planning (16)	^	Software	X
☒ In-market Software	—	Software	X
☒ In-market Business & Productivity Software	—	Business & Productivity Software	
☐ In-market CRM Solutions	—		
☐ In-market	—		
+ New segment			

Targeting setting for this campaign [?](#)

Targeting setting for this campaign ?

Targeting

Narrow the reach of your campaign to the selected segments, with the option to adjust the bids

Observation (recommended)

Don't narrow the reach of your campaign, with the option to adjust the bids on the selected segments

Network Strategy Justification

For the initial TaskFlow Search campaign, I chose to advertise on Google Search only, with the Google Search Partners Network and Google Display Network disabled. This decision was made to maintain greater control over traffic quality while working with a small test budget.

Although the campaign primarily incurs costs when users click the ads, expanding the campaign to additional networks could generate more clicks from users with different levels of intent. A user actively searching Google for terms such as “project management software” demonstrates clear intent and is therefore closely aligned with TaskFlow's free-trial objective.

Limiting the initial campaign to Google Search allows the available budget to focus on these high-intent searches rather than maximising reach alone. Performance can then be evaluated using metrics such as click-through rate, conversion rate and cost per conversion. Search Partners or other networks could subsequently be tested if the initial campaign produces sufficient performance data.

Strategy:

Relevant reach first → measure performance → expand based on data.

Campaign optimization score

Weekly estimates
Estimates are based on your keywords and daily budget

Ad group 1

Weekly conv.	Cost / Conv.
3	A\$20.65
Weekly cost	A\$70.00

Ad Spend Justification

An average daily budget of A\$10 was selected for the initial TaskFlow Search campaign, resulting in a planned weekly spend of approximately A\$70. As this is a new campaign with limited historical performance data, a conservative test budget reduces financial risk while allowing initial conversion data to be collected. Google Ads estimated approximately three conversions per week at A\$20.65 per conversion at this budget level. Although Google recommended a higher daily budget of A\$76.65, the lower budget was retained to support controlled testing. Campaign performance can then be evaluated before increasing spend based on actual conversion results.

Final Campaign Configuration

The completed TaskFlow campaign uses Google Search to target users searching for project-management software. The campaign contains 10 researched keywords, a responsive search ad, site link and callout assets, an average daily budget of A\$10 and a Maximise Conversions bidding strategy. The campaign directs users to the TaskFlow landing page, where completed free-trial registrations are measured through the Sign-up conversion action. The campaign was prepared and reviewed but was not published, as it was created as a practical training exercise rather than a live commercial advertising campaign.

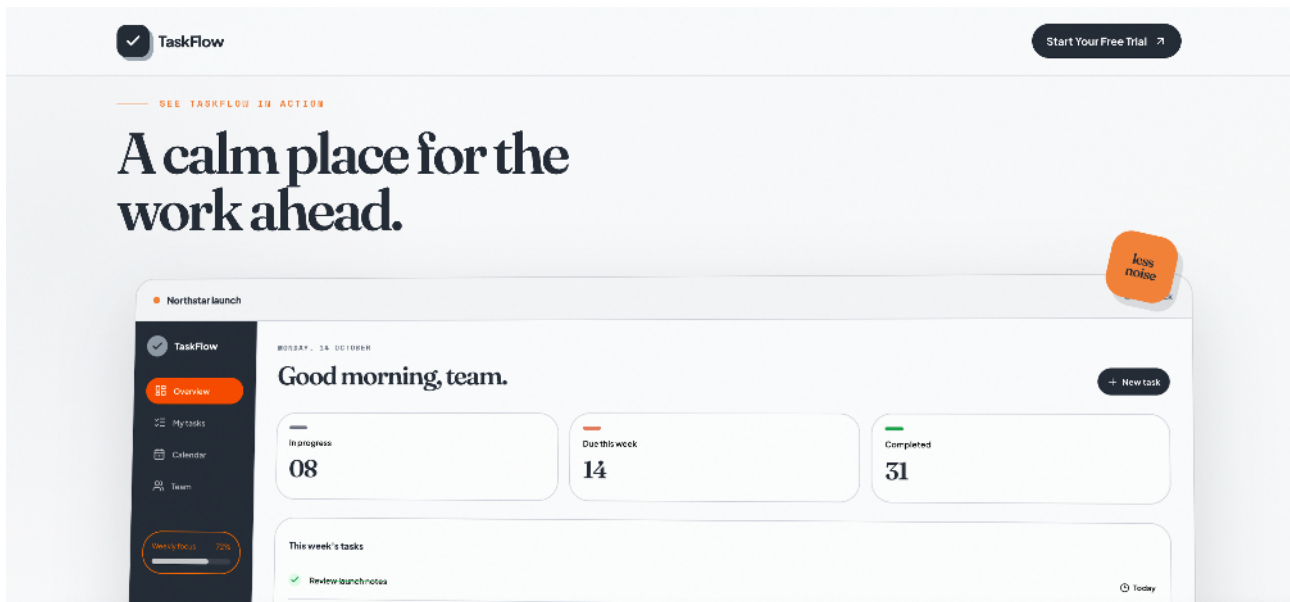

TaskFlow Landing Page

A dedicated landing page was created for the TaskFlow campaign to provide a relevant destination for users clicking the Search ad and to support the free-trial conversion journey.

Live landing page:
